Netherlands Environmental Management Policy 2023

Environmental Management Policy

With an eye for innovation and a drive to deliver unsurpassed digital content experiences, EdgeConneX was born. EdgeConneX Netherlands BV is the Dutch Site of EdgeConneX with locations in the US and EU Edge Services provide space, power & connectivity to deliver digital content. With EdgeConneX, data delivery is optimized by placing Edge Data Centers as close as possible to the end user's point of access. The Amsterdam EdgeConneX Edge Data Center has been purpose-built and precisely located to provide a secure colocation facility for customers. They offer 5,780 m^2 facility and 2,920 m^2 of raised floor for tenant racks. The international company meets the standards of ISO 27001, SOXII and PCI.

EdgeConneX Netherlands B.V. and EdgeConneX AMS04 B.V. *(combined further as EdgeConneX)* are indirectly owned by EdgeConneX Europe B.V. (Kamer van Koophandel nummer 70280266 / vestigingsnummer 000038568047) Koolhovenlaan 12, 1119 NE Schiphol-Rijk.

The four properties are:
1. AMS01 Koolhovenlaan 12, 1119 NE Schiphol-Rijk;
2. AMS02 Cessnalaan 55, 1119 NK Schiphol-Rijk;
3. AMS03 Koolhovenlaan 20, 1119 NE Schiphol-Rijk.
4. AMS04 Cessnalaan 36, 1119 NE Schiphol-Rijk.
5. AMS05 Koolhovenlaan 6, 1119 NE Schiphol-Rijk.

EdgeConneX wishes to present an image of and behave as an organization that always strives for quality, continuity, durability, improve environmental performance, satisfy customers and other stakeholders. In order to realize this, EdgeConneX has set up an environmental management system, hereafter called 'management system' which secures all crucial moments in the field of environment. Moreover, this management system fulfils the requirements of NEN-EN-ISO 14001 so that the effect of this management system can also be verified and confirmed by independent parties.

The scope of the management system includes all operating assets, employees (incl. temporary staff), and activities carried out by "*EdgeConneX*" on the four (above mentioned) locations situated at Schiphol-Rijk. The scope of the management is defined as follows:
"Providing space, power & connectivity to deliver digital content to customers".

An important aspect of the management system is that improvements are continuously and systematically strived for in the area environment. The organization ensures the protection of the environment, including the prevention of pollution. Negative effects on the environment are minimized, so that the quality of the natural environment and the working environment can be positively influenced for both the benefit of the environment and employees.

When determining the various environmental issues EdgeConneX starts from a lifecycle perspective. The organization, in its operations, meets the applicable laws and regulations.

Besides this the organization ensures that it has a controlled work environment by means of implementing the Risk Assessment - Evaluation which includes its associated current plan.

The necessary improvements can be initiated in response to the periodic assessments of risk analysis and assessment of the company's continuity, evaluations with customers, a good internal and external consultation structure, periodic internal audits, actions based on monitoring and measurement and an annual management review considering changes in the legislation.

The analysis of risks is a relevant part of the management system. For environment, the risks are determined from energy use. To control and mitigate those risks measures are taken.

The Regional Director in cooperation with the OPS manager of EdgeConneX is responsible for the design, implementation and evaluation of the management system. Through this the organization is committed to an effective management system that is suitable and appropriate for the organization.

Once a year several objectives are defined focusing on environmental results. These objectives are developed, monitored and adjusted where necessary. In addition, the Regional Director in cooperation with the OPS manager take all possible measures, including making available resources, to implement the policy and to ensure that this policy is understood by all employees, endorsed and disseminated.

Every employee is responsible for compliance with the agreements recorded in the management system. The operational management of the management system is carried out by the OPS manager. He takes care of the maintenance of the management system, the implementation of internal audits and is responsible for reporting to the Regional Director. The OPS manager is under the direct control of the Regional Director. This policy will be actively promoted to employees and applied in operations.

The client will also allow the policy to be available to relevant stakeholders.
