

# EARTH DAY 2025: The People Behind the Progress

Sustainability isn't just a goal. It's a collective effort at EdgeConneX, powered by people who care deeply about doing things the right way.

Meet the experts leading the charge toward zero waste, water neutrality, and sustainable power. 🌍

**This is what sustainability looks like.**

## Haley Willis Chittick

Sr. Environmental Engineer

“— Environmental performance isn’t a box to check — it’s how we operate.

Haley leads compliance across our global data centers, making sure every site meets environmental obligations—from spill prevention and permitting to air emissions and Zero Waste certification. She also heads our global water neutrality program.

A North Carolina barrier island childhood shaped her passion for coastal resilience and conservation. Today, she sees sustainability not as a side effort but as a key driver of operational excellence, community strength, and long-term impact.

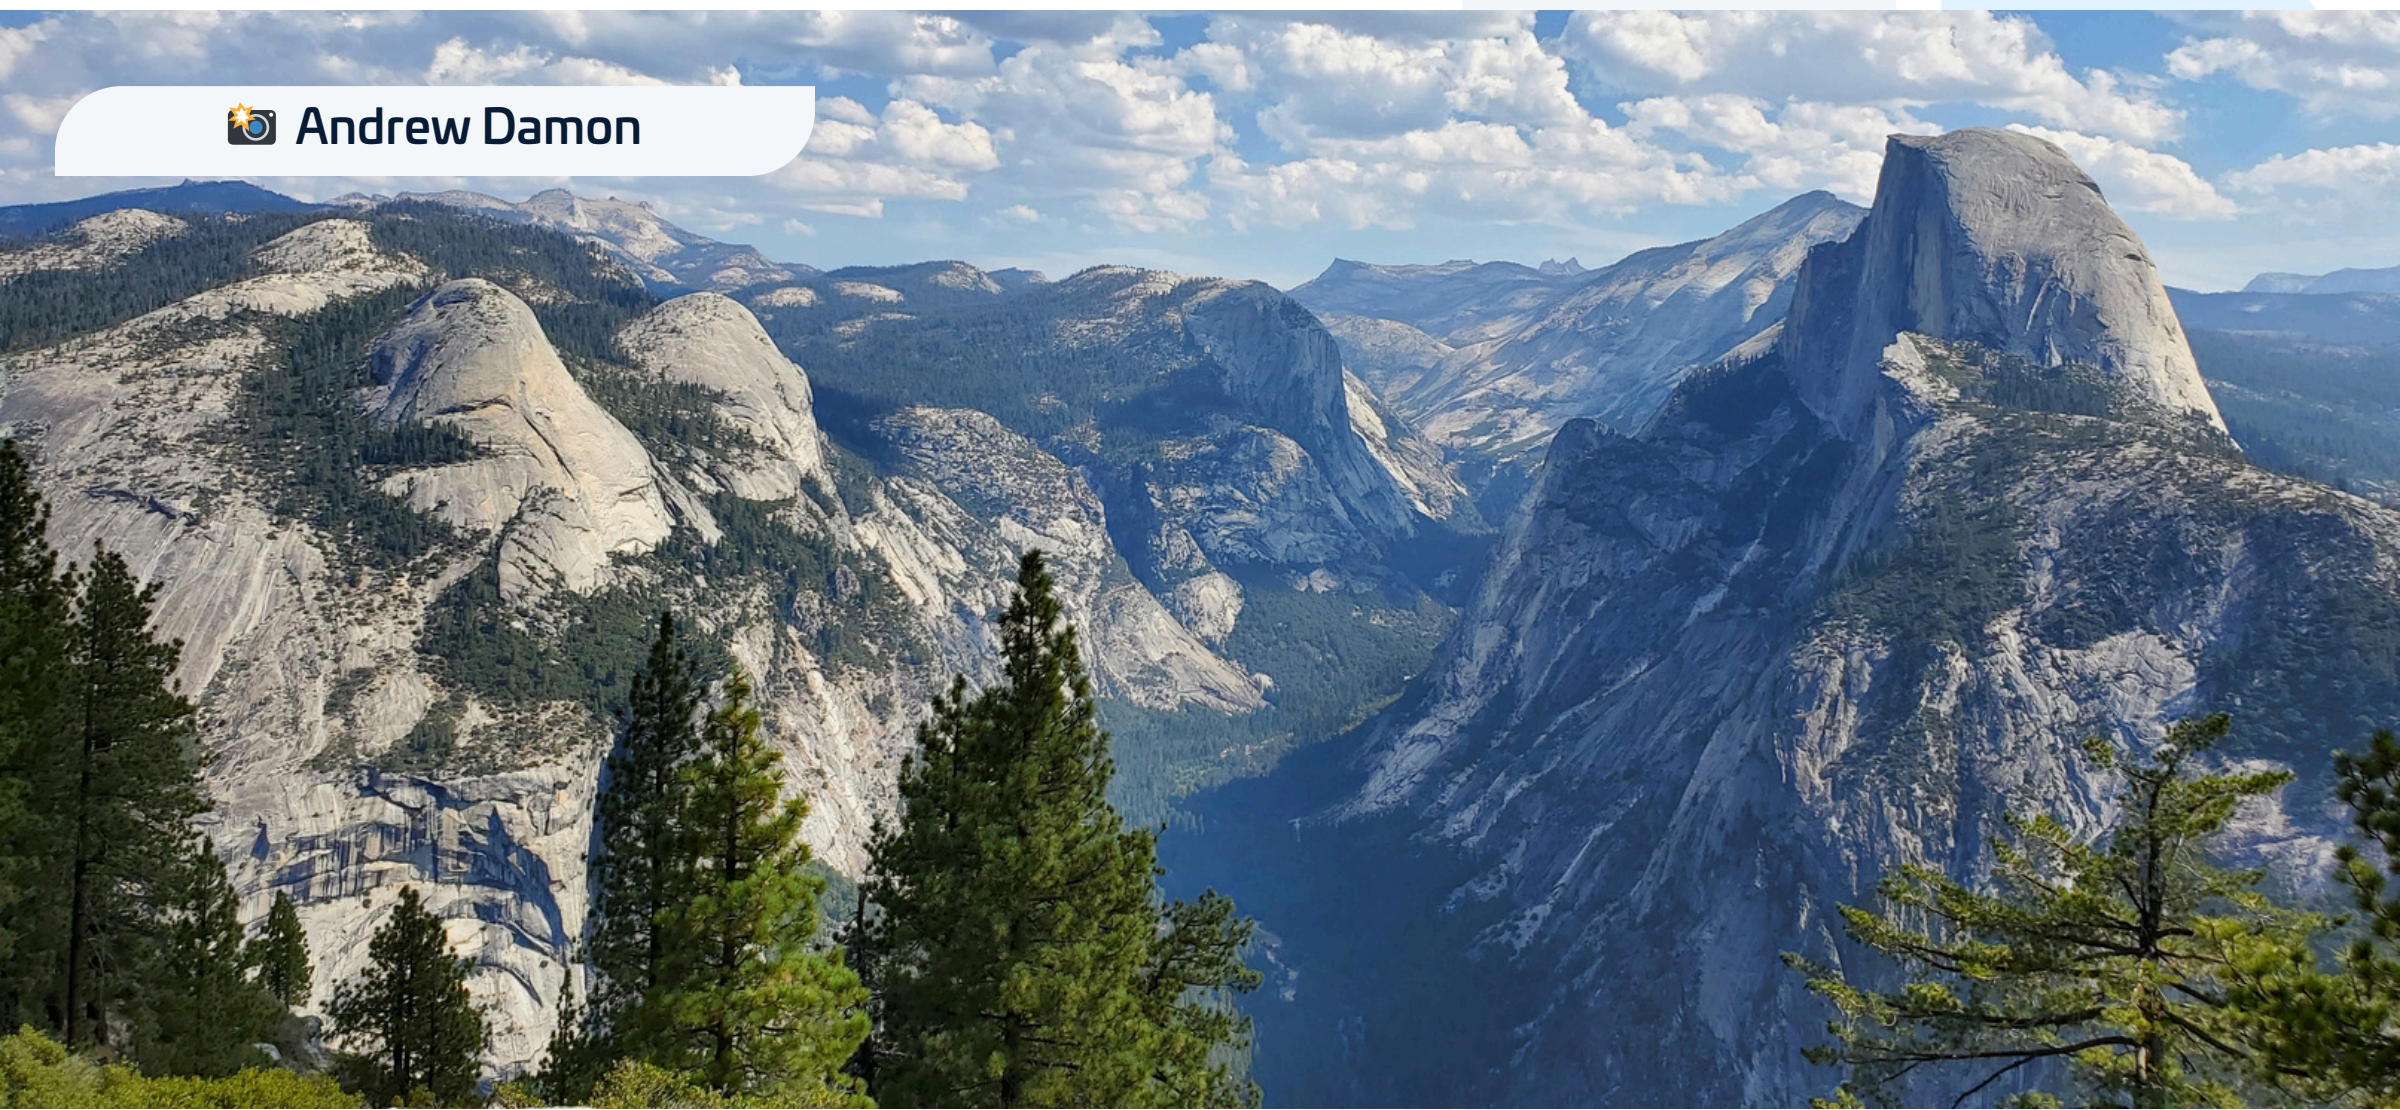

**Raj Chudgar**  
Chief Power Officer

“Power drives the digital world. It’s our job to make sure it doesn’t cost the planet.”

Raj oversees ECX global sustainability strategy, aligning innovation with environmental responsibility. Since building our first sustainability roadmap in 2019, he’s ensured the right resources, capabilities, and direction are in place to meet our long-term goals.

He believes the small decisions matter—and that without a path to sustainability, there may be no future for the planet we all share.

 Andrew Damon

## Braden Walden

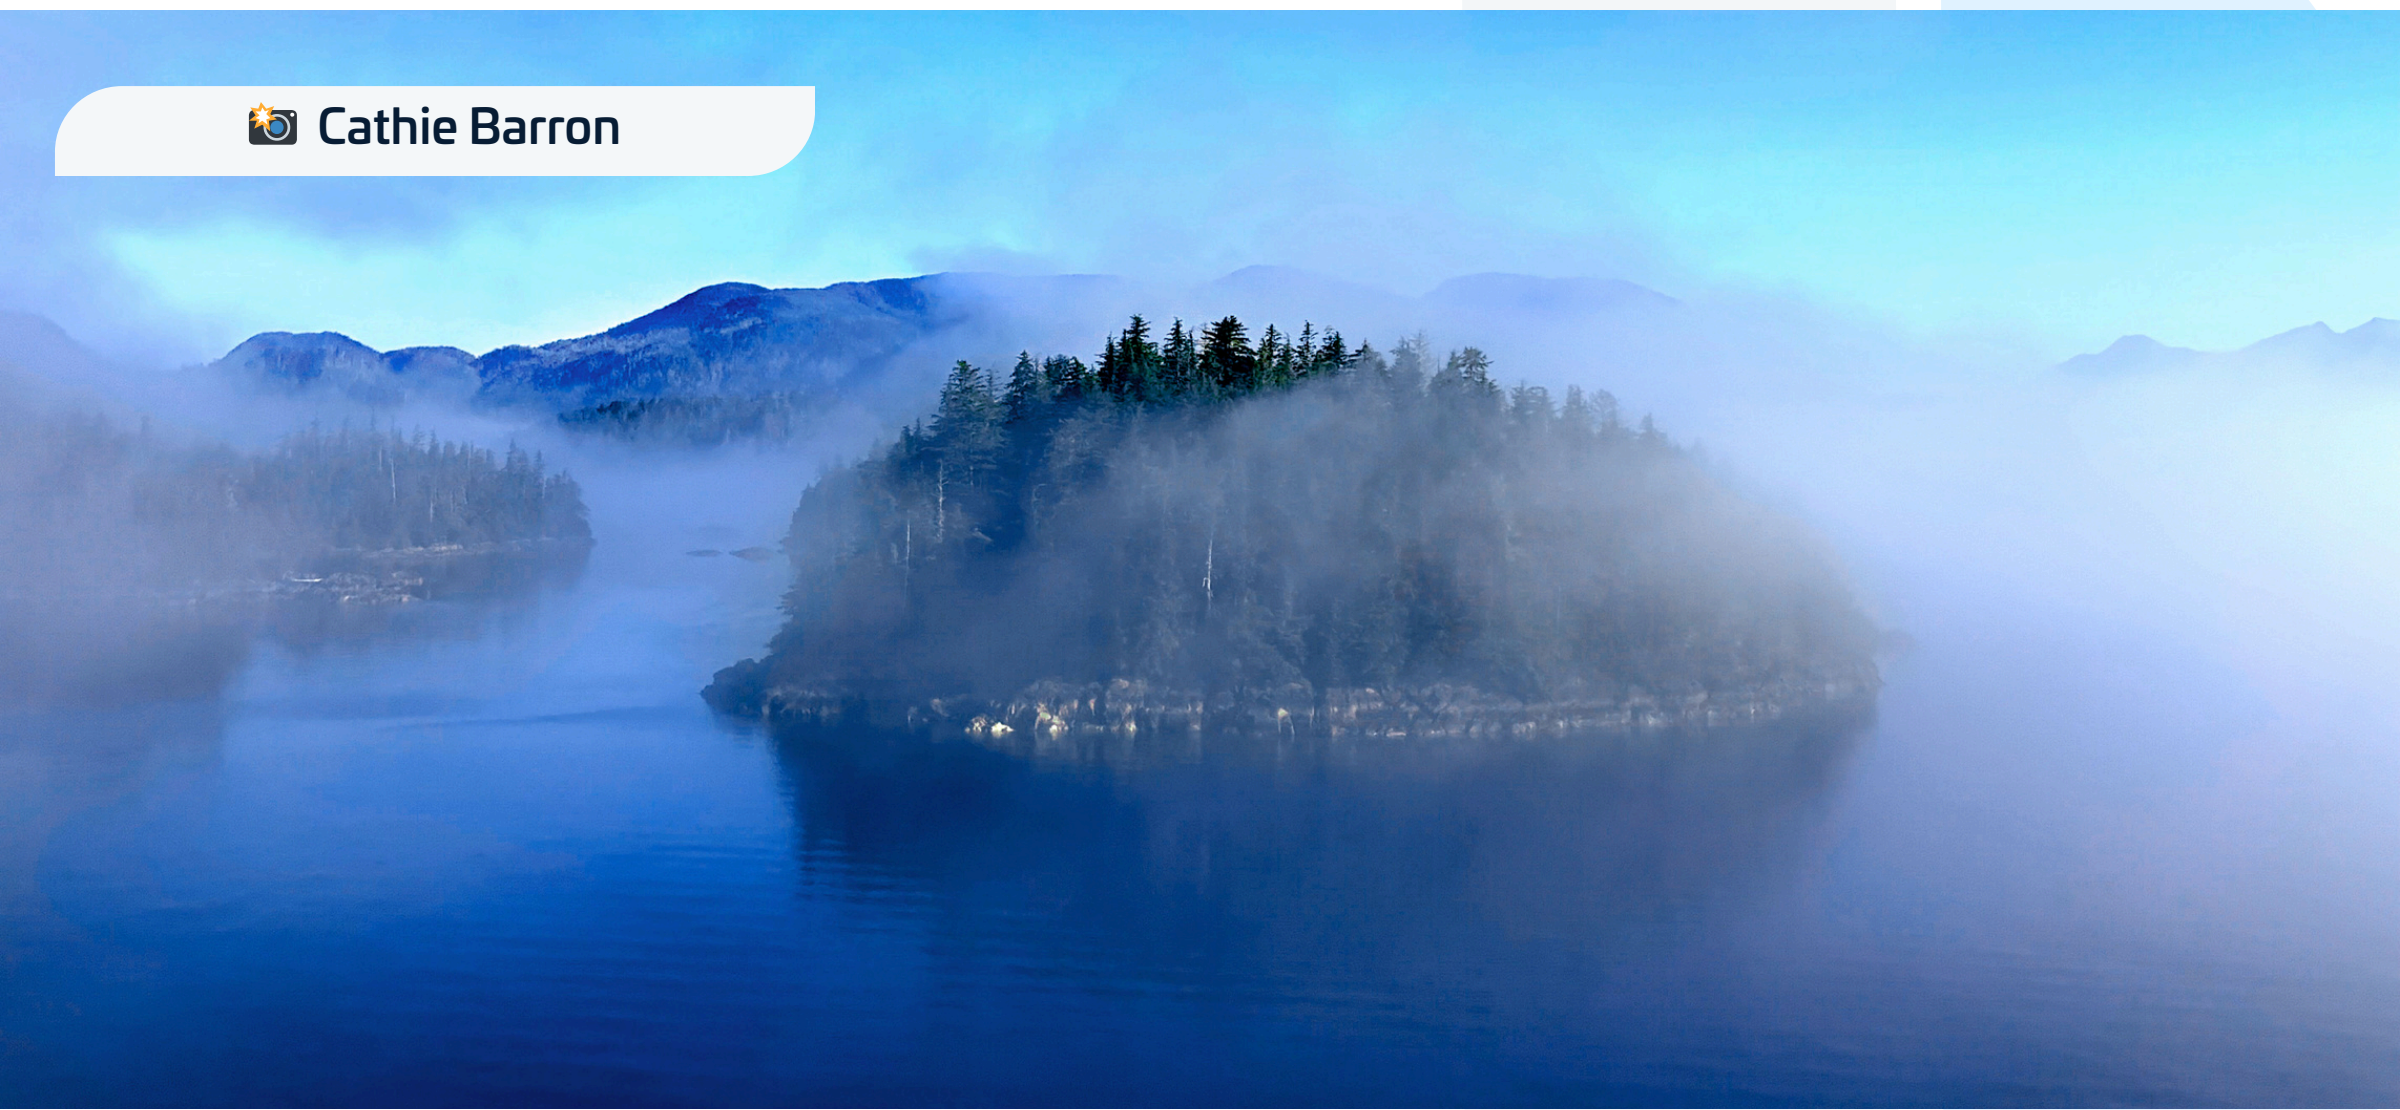

Sr. Power & Sustainability Analyst

“—  
| The most important thing we can do is talk about climate—openly, empathetically, and often.”

Braden works at the crossroads of power and sustainability. From negotiating renewable energy contracts to installing rooftop solar and prepping ESG reports, he helps make our growth greener.

His tip? Don't stay silent. Conversation and collaboration are key to solving the climate crisis. Everyone has a role to play—and it starts with talking about what's at stake.

 Cathie Barron

## Andrew Brodeur

VP, National Real Estate

“—  
| My kids challenge me to build a future that’s better than the one I inherited.”

Andrew leads our power billing and environmental compliance teams, working with Alex, Haley, and others to reach our 2030 goals. From green power purchasing to Zero Waste Compliance, he helps put sustainability front and center.

He’s especially proud of our water neutrality work—restoring rivers and waterways near ECX sites. For Andrew, it’s about creating infrastructure that gives back to the places it touches.

## Katie Tonucci

Environmental Analyst

“—  
I’ve always loved nature. Now I get to help protect it through my work.”

Katie manages environmental compliance for U.S. sites—from Tier II hazardous materials to air permits and spill plans—and plays a key role in our Zero Waste initiative.

Her view? Sustainability is essential for our future because it drives innovation while keeping people and ecosystems safe. Her favorite tip: start composting. It’s a simple act that prevents methane emissions and reduces landfill waste, proving that small choices really do make a difference.

## Alex Dymersky

Power & Sustainability Manager

“  
If you're not doing things sustainably, you're doing them unsustainably. There's no middle ground.

Alex brings a deep love for the outdoors into his approach to sustainability—from hiking and fishing to managing ECX's power and renewable energy strategies.

One of his proudest achievements? Helping ECX achieve 100% renewable power for data center operations. His advice is to understand your footprint first. Knowing your personal impact is the best way to start making better choices that preserve resources for future generations.

 Cathie Barron

## Josette Suarez

Power & Sustainability Analyst

“—  
If we don't do our part now, there may not be a world to pass on.

Josette supports power contracts, sustainability reporting, and water-focused initiatives across the ECX portfolio. From customer and certification reports to upcoming water neutrality milestones, her work bridges numbers and environmental impact.

She's proud of the water projects currently in motion and can't wait to share more soon. Her advice? Unplug what you're not using—those “phantom” energy draws add up. Earth Day, for her, is every day: “It's why I have this job.”

 Reich Stenitho

## Haley Willis Chittick

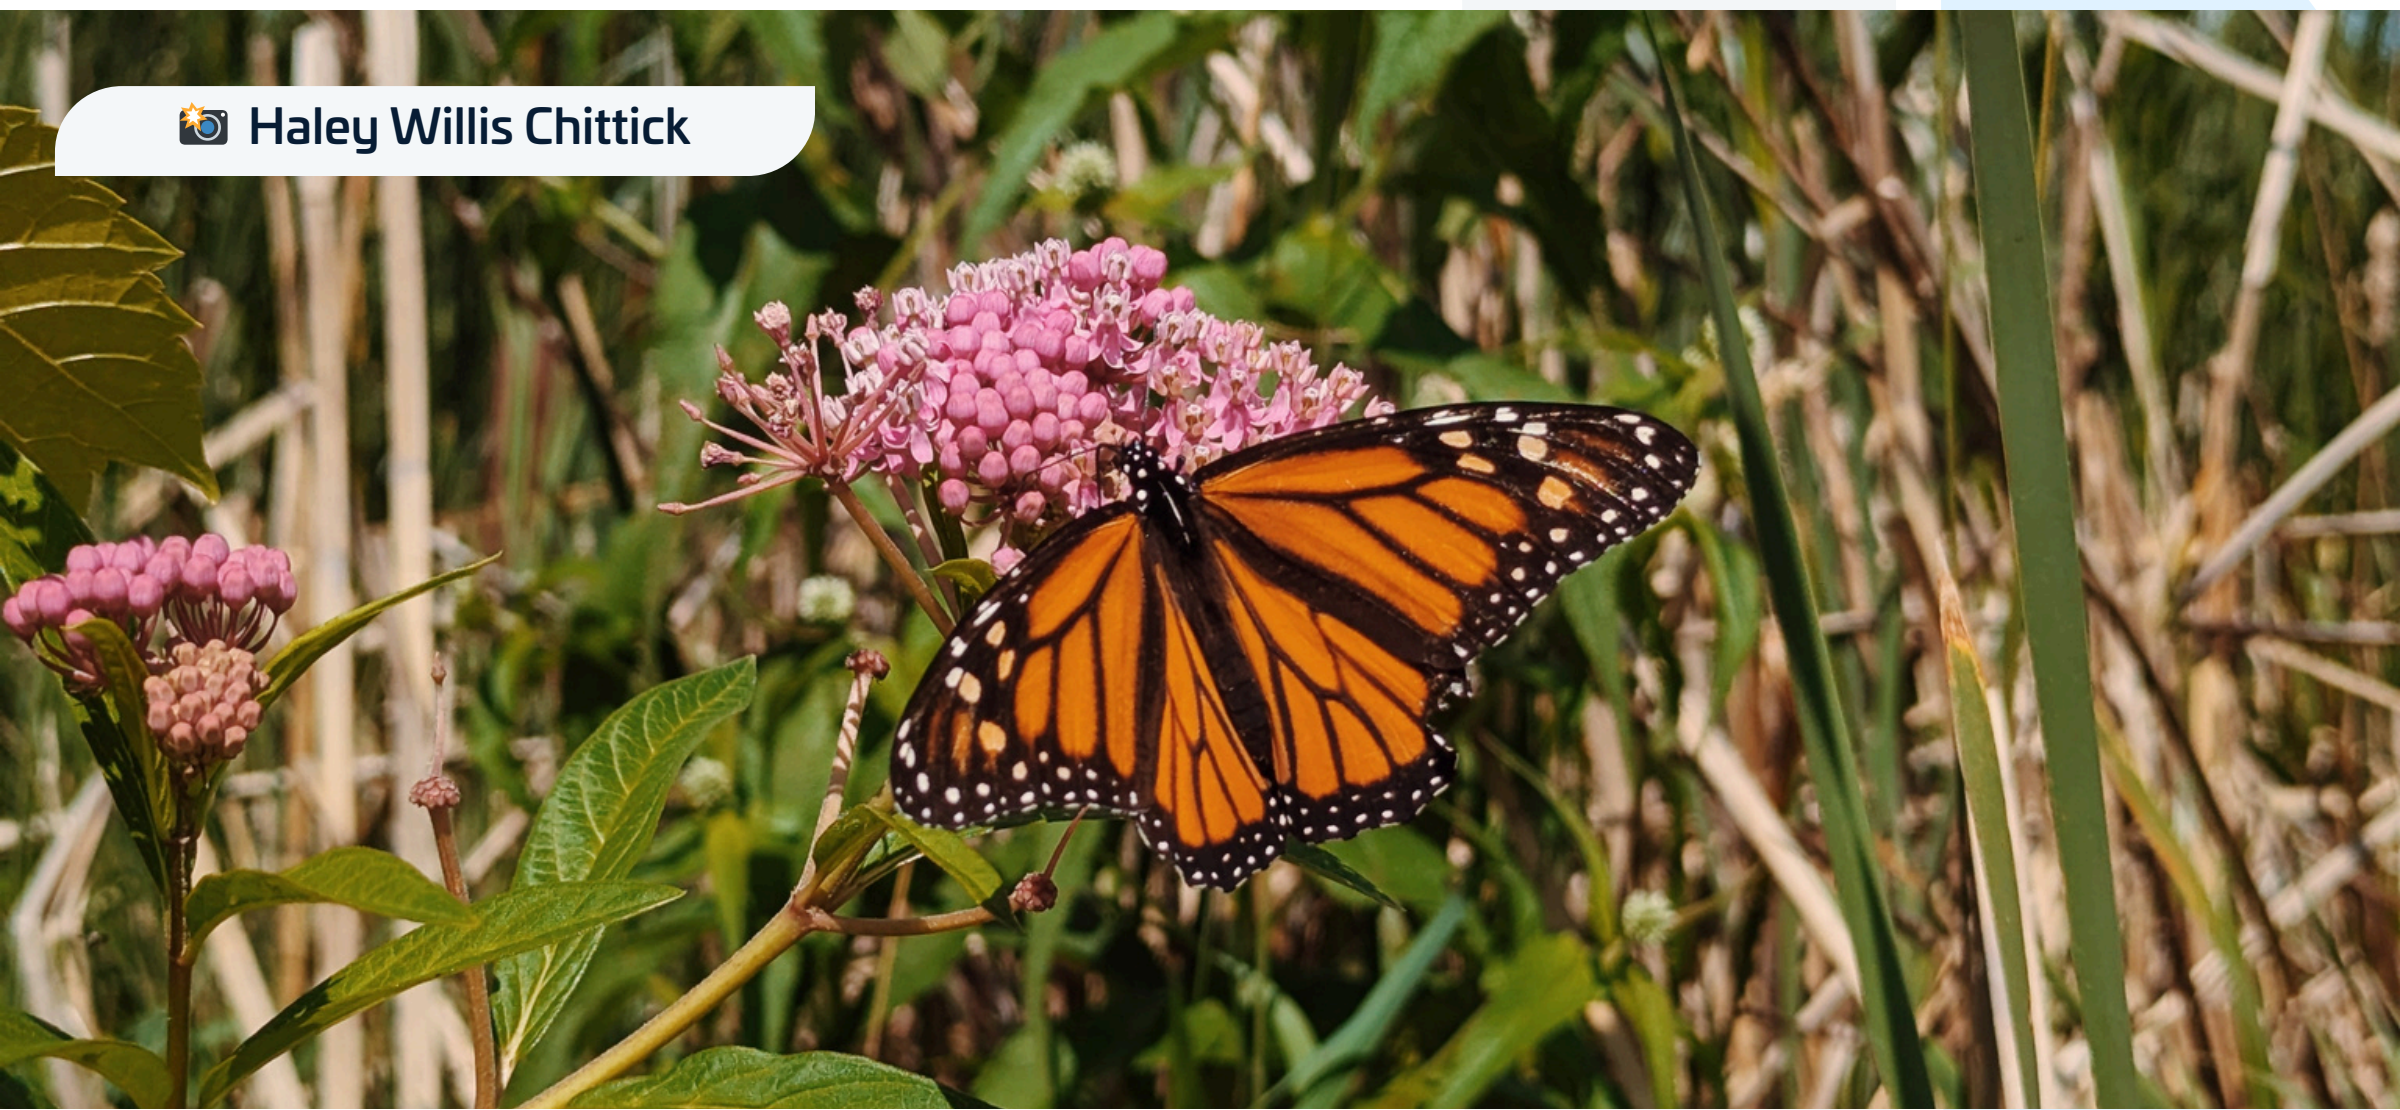

Sr. Environmental Engineer

“—  
| **Earth Day is my reset. It's why I do what I do.**

Haley sees Earth Day as more than a celebration—it's a reminder to pause, realign, and recommit. Her approach to sustainability is rooted in curiosity, not judgment.

"Imperfect action, driven by empathy, is far more powerful than perfection," she says. And that's what keeps her going—every permit reviewed, every metric tracked, every team aligned in pursuit of a healthier planet.
